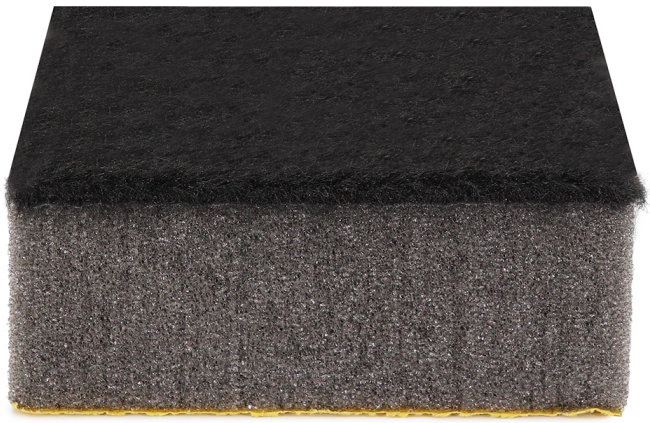
PF BLACK

Acoustic absorption panel made from PU foam with a black polyester fiber facing. Good sound absorption and a technical finish for visible applications without specific fire requirements.



The **AKUSTIKABSORBER PF BLACK** is an acoustic absorption panel designed to **reduce reverberation and improve acoustic comfort** in technical spaces, machinery, and enclosures, while providing a **durable, discreet, and visually clean finish**. It consists of **open-cell polyurethane foam** covered with a **black non-woven polyester fiber facing**, which allows sound waves to reach the absorbent core.

The black textile facing provides **light protection against dust and dirt**, as well as improved resistance to surface wear caused by minor rubbing or contact. Its dark and uniform appearance makes it particularly suitable for **visible machinery enclosures, electrical cabinets, technical cabins, suspended ceilings, and machine housings**, where a discreet appearance is required.

PF BLACK does not provide specific fire-resistant properties and is therefore recommended for **environments without particular fire performance requirements**, where a good balance between **sound absorption, appearance, and surface durability** is required.

Technical characteristics

-

Black unwoven fabric and absorbing polyurethane foam.

-

15mm 25mm 40mm

Formats

-

1200x1000 mm
15mm thick, 8 Sheets per box.
25mm thick, 5 Sheets per box.
40mm thick, 3 Sheets per box.

-

1500mm wide x approx. 20m long

Advantages

High absorption capacity

This material is highly porous and, thanks to its high absorption capacity, reduces reflections and reverberation time in enclosed spaces.
