Akustik Omega Levelling Bracket

Two-point fixing bracket with female connection for threaded rod. Provides increased safety and load capacity for suspended systems beneath lightweight concrete floors.

The **Akustik Omega Levelling Bracket** is a mechanical accessory designed for the **fixing of threaded-rod suspension systems**, particularly beneath lightweight concrete floors.

Its **two fixing points** provide improved load distribution and a more secure and robust connection to the supporting structure than a single-point fixing.

The **central female connection** allows direct connection of a threaded rod, facilitating the installation of acoustic hangers and other suspended components.

Connection element for AMC acoustic hangers, particularly suitable for timber floors and structures.

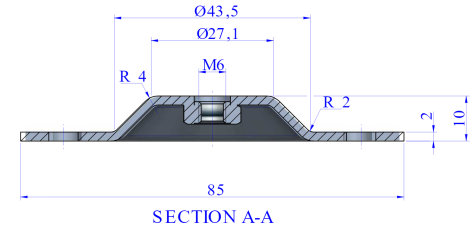

Its compact and robust design makes it particularly suitable for installations requiring **increased load capacity and fixing security**.
