Akustik leveling omega

Double-anchor ceiling attachment with a female threaded connection for suspension rods. Provides increased load capacity and secure installation in low-strength concrete.

The **Akustik Leveling Omega** is a mechanical ceiling attachment designed for suspended ceiling systems using threaded rods.

Its **two-point anchoring design** distributes the load between two fasteners, providing a more secure attachment to the supporting structure. This configuration is particularly suitable for applications where the concrete has **limited load-bearing capacity** or where additional anchoring reliability is required.

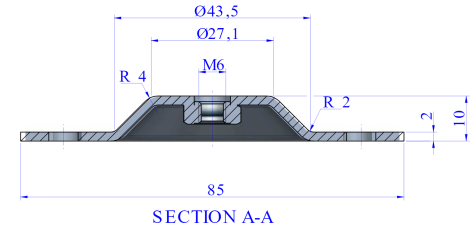

The integrated **female threaded connection** allows direct installation of the suspension rod and facilitates accurate positioning of the suspended ceiling system.
