# 1 AMC Anti-Seismic Spring Isolators

## Anti-seismic spring vibration isolators with integrated seismic restraints, designed to provide low-frequency vibration isolation and mechanical protection of equipment under seismic conditions

**AMC-MECANOCAUCHO® 1 AMC Anti-Seismic Spring Isolators** combine **high-deflection steel springs** with an **integrated seismic restraint system** to provide both effective vibration isolation and mechanical protection of equipment under seismic conditions.

Under normal operating conditions, the springs allow the movement required for effective **low-frequency vibration isolation**. Under exceptional or seismic loads, the **seismic restraint system** limits excessive equipment movement and helps maintain its mechanical integrity.

The restraint system has been specifically designed to **withstand high dynamic loads** that may occur during a seismic event without compromising vibration isolation performance under normal operating conditions.

These spring isolators are particularly suitable for **equipment incorporating moving or rotating components**, including **fans, pumps, compressors, refrigeration units, generator sets, and HVAC equipment**, where both low-frequency vibration isolation and mechanical protection in seismic zones are required.

## Advantages

### Easy installation

This mount requires no major modifications to the structure for installation.

### Improved isolation

It offers improved isolation compared to conventional anti-vibration mounts of similar geometry.

### Mount offering high stability

Suspensions built with this mount barely move, thanks to a geometry designed to control the movement of the suspended element.
