

9 AMC Anti-Seismic Spring Mounts

Nine-spring anti-seismic mounts designed for very high loads, with low-frequency vibration isolation and integrated seismic restraints.

AMC-MECANOCAUCHO® 9 AMC Anti-Seismic Spring Mounts incorporate **nine high-deflection steel springs**, allowing them to support **very high loads** whilst maintaining the vertical flexibility required for effective low-frequency vibration isolation.

The nine-spring configuration provides a **particularly high load capacity** whilst maintaining a **low natural frequency**, helping to reduce the transmission of vibration from the equipment to the supporting structure.

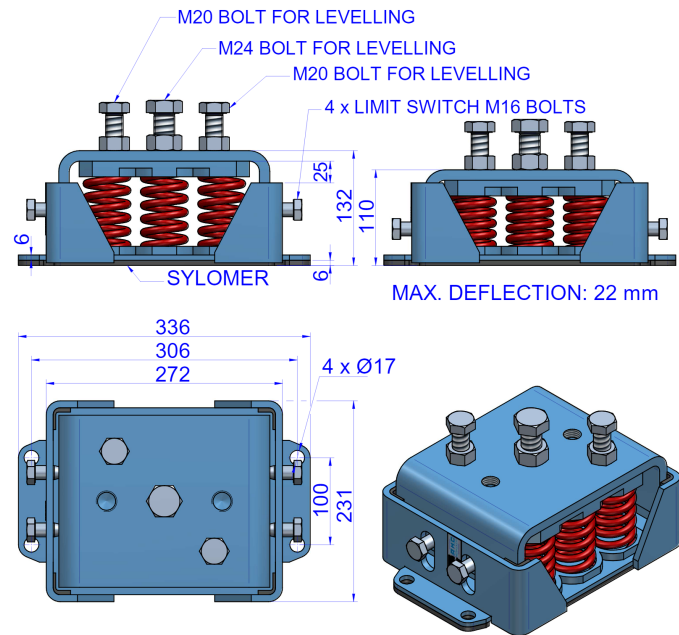

Under normal operating conditions, the springs have the freedom of movement required for effective vibration isolation. Under exceptional or seismic loads, an **integrated seismic restraint system** limits excessive equipment movement and helps maintain its mechanical integrity.

This robust design combines **very high load capacity, low-frequency vibration isolation and seismic protection** within a single spring mount.

9 AMC spring mounts are particularly suitable for **heavy equipment incorporating moving or rotating components**, including **refrigeration units, air handling units, fans, pumps, compressors, generator sets and other large HVAC or industrial equipment**.
