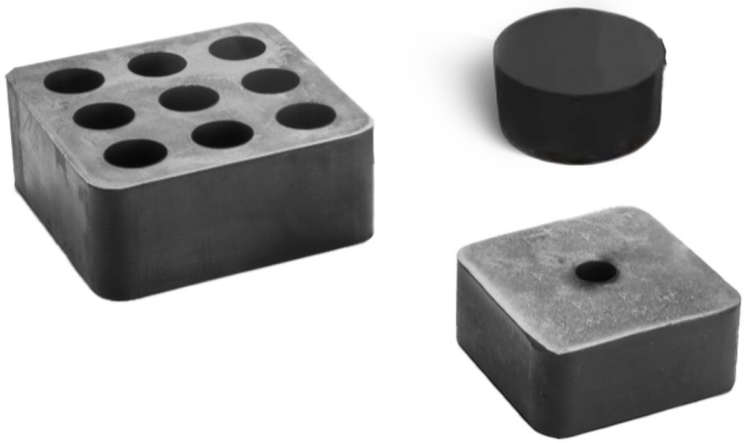
Mecanocaucho® Blocks

AMC-MECANOCAUCHO® rubber anti-vibration blocks designed to reduce vibration transmission between machinery and its supporting structure.



AMC-MECANOCAUCHO® anti-vibration blocks are rectangular rubber elements designed to **reduce the transmission of vibrations** from industrial machinery and equipment to the supporting structure.

Their simple design allows them to be **installed directly beneath the equipment without anchors or mechanical fixings**, considerably simplifying installation.

Available in **various dimensions and thicknesses**, they allow the supporting area, load and elastic characteristics to be adapted to the requirements of each installation.

MecanoCaucho® blocks provide a **simple, reliable and economical vibration isolation solution** for industrial machinery and equipment where a mechanical fixing system is not required.
