Mini Anti-Seismic Spring Isolator

Compact anti-seismic spring isolator for low-frequency vibration isolation, with an integrated seismic restraint system.

The **AMC-MECANOCAUCHO® Mini Anti-Seismic Spring Isolator** is designed to provide **effective low-frequency vibration isolation** while offering mechanical protection of the equipment under seismic loads.

Its compact design incorporates a **high-deflection steel spring**, providing a **low natural frequency** and effectively reducing the transmission of vibration from the equipment to the supporting structure.

Under normal operating conditions, the spring has the freedom of movement required for effective vibration isolation. Under exceptional or seismic loads, the **integrated seismic restraint system** limits excessive equipment movement while helping maintain its mechanical integrity.

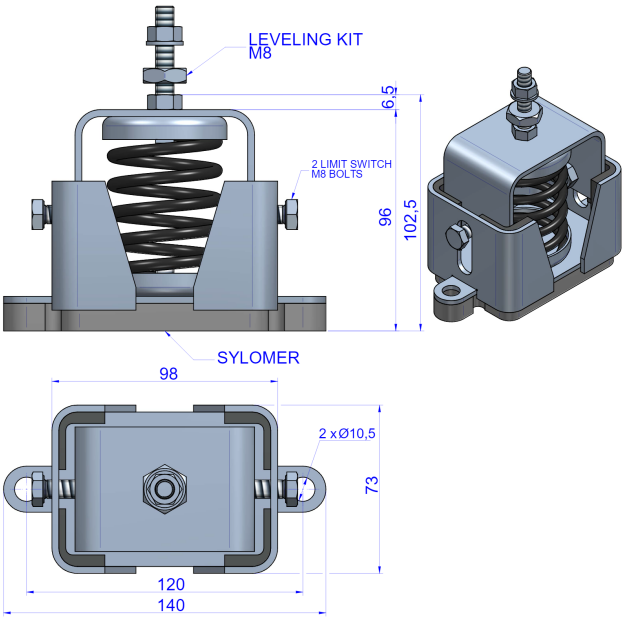

Thanks to its **compact dimensions**, the Mini range is particularly suitable for installations with **limited available space** and mechanical equipment requiring both **low-frequency vibration isolation and seismic protection**.
