Anti-rebound washer

Corrosion-resistant safety washer designed to limit rebound movement, protect the elastomer and provide mechanical retention of the equipment.

The **AMC-MECANOCAUCHO® anti-rebound washer** is designed to complement vibration isolators in applications subjected to **vertical movement, shocks or high dynamic loads**.

Positioned to limit the movement of the isolator under tensile loads, it acts as a **mechanical anti-rebound safety device**, controlling excessive equipment movement while maintaining the elastic performance of the vibration isolator.

Its **corrosion-resistant treatment** provides effective protection in demanding environmental conditions and contributes to the reliability and durability of the assembly.

The **washer thickness must be selected according to the application**, the vibration isolator used and the allowable displacement. Please contact our technical department to determine the most suitable configuration for your application.
