ANTI SKID RUBBER BASES

Circular anti-slip rubber pad for light machinery and equipment, designed for direct floor installation without fixing.

The **AMC-MECANOCAUCHO® Anti-Slip Rubber Pads** are designed to be placed directly beneath machinery and equipment that do not require fixing to the floor.

Their **rubber surface provides improved grip** and helps limit movement of the machine during operation.

Their simple design allows **quick installation without anchors or screws**. The elasticity of the rubber also provides **basic vibration isolation**, helping to reduce the transmission of vibrations and structure-borne noise to the floor.

They provide a simple and economical option for **light machinery, small equipment and auxiliary industrial applications**.
