ANTI SKID RUBBER BASES

Circular anti-slip rubber pad for light machinery and equipment, designed for direct floor installation without anchoring.

The **AMC-MECANOCAUCHO® Anti-Slip Rubber Pads** are designed for placement directly beneath machinery and equipment that do not require anchoring to the floor.

Their **rubber surface provides improved grip** and helps prevent unwanted movement of the machine during operation.

Their simple design allows **quick installation without anchors or bolts**. The elasticity of the rubber also allows the pad to act as a **basic vibration isolator**, helping reduce the transmission of vibration and structure-borne noise to the floor.

They provide a simple and cost-effective option for **light machinery, small equipment, and auxiliary industrial applications**.
