Vibrabsorber Low-Profile Series

Compact low-profile spring isolators for light machinery, with an optional Sylomer® pad to improve high-frequency vibration isolation

The **AMC-MECANOCAUCHO® Vibrabsorber Low-Profile Series spring isolators** are designed for the **vibration isolation of machinery incorporating rotating or reciprocating components**, particularly where installation height is limited.

Their **compact, low-profile design** makes them particularly suitable for **light machinery** and equipment where installation space is restricted, while providing resilient isolation between the machine and the supporting structure.

The spring isolators reduce vibration transmission to the structure, helping to minimize **structure-borne noise** and vibration transmitted to surrounding equipment.

An optional **Sylomer® pad** complements the action of the steel spring by improving **high-frequency vibration isolation**. This combination provides **effective vibration isolation over a wider frequency range**.

Advantages

Easy installation

This mount requires no major modifications to the structure for installation.

Excellent value

This mount delivers very high performance for its cost compared to other possible solutions.
