Akustik Lateral Acoustic Hanger

Elastomeric acoustic hanger for side mounting to walls or structural members where direct attachment to the overhead slab is not possible.

The **Akustik Lateral Acoustic Hanger** is designed for the resilient suspension of **acoustic ceilings and mechanical equipment**, particularly where side mounting to a wall, beam, or other structural member is required.

The hanger incorporates the same **high-performance elastomeric isolation element** used throughout the Akustik range, specifically designed to reduce the transmission of vibration and structure-borne noise. It is suitable for equipment operating above **1,000 rpm**.

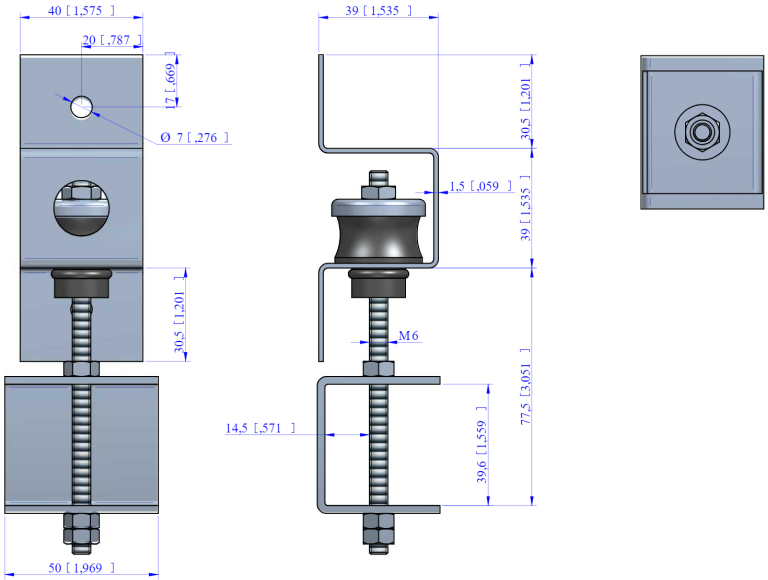

The robust steel bracket is designed to withstand loads of up to **1,433 lb** and accommodates **1-1/2 × 1/2 in. ceiling channels**. The metal components are **zinc plated for corrosion protection** and long-term durability.
