Spring Rubber Acoustic Ceiling Hanger

Spring and rubber ceiling hanger for vibration and structure-borne noise isolation.

The **Spring Rubber acoustic ceiling hanger** is designed for the resilient suspension of ceilings where effective vibration and structure-borne noise isolation is required.

The combination of a **steel spring and elastomeric element** provides effective vibration isolation over a wide frequency range, while the **dual-point attachment** provides a secure and stable connection to the supporting structure.

It is suitable for suspended ceiling applications requiring **high vibration isolation performance, mechanical reliability, and long-term durability**.
