Akustik + Sylomer® Channel Clip

Omega profile support with pressure and screw fixation. Superior insulation with double Sylomer®. Ideal for ceilings and linings.

The **Akustik + Sylomer® Channel Clip** has been specifically designed to directly interface with the standard 'top hat' metal furring channels which are widely available in the UK.

The low profile design provides space saving for both acoustic walls and suspended ceiling installations, fixing in place is quick and easy thanks to a single central fastener.
The 'top hat' channel is simply pressed in to place and secured via 2x screws for extra security.

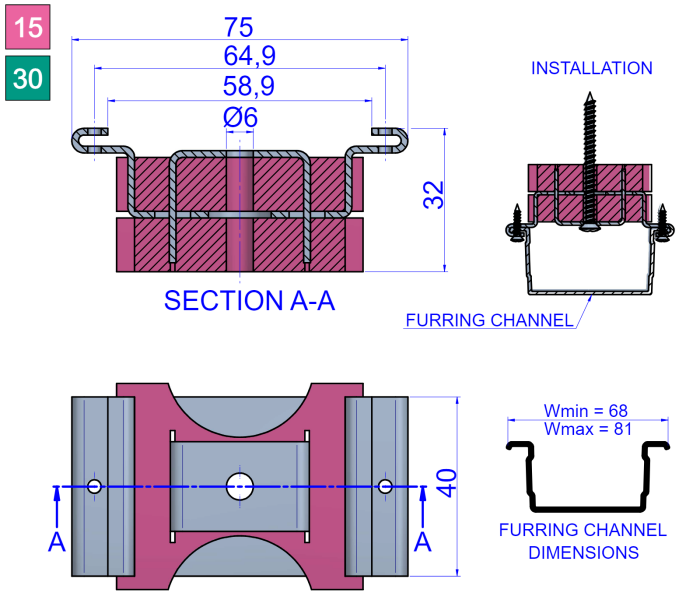

Noise and vibration is decoupled by the use of Sylomer®, a proven material that provides exceptional acoustic results and unrivalled long term durability.
The metal components provide an overload-proof and fail safe design, factors which are particularly important where resistance to fire or shock is necessary.

Advantages

Easy installation

This mount requires no major modifications to the structure for installation.

Incorporates Sylomer® elastomer, highly effective for isolating both high and low frequencies

Sylomer® provides high isolation across a wide frequency range and is particularly effective at high frequencies, effectively eliminating the transmission of structure-borne noise.

Secure ceiling anchorage

With more than one attachment point to the overhead slab, it is particularly reliable for anchors with low load-bearing capacity.
