VT Spring Hanger

Spring hanger for suspended ceilings and machinery operating above 450 rpm. Natural frequencies from 3 to 5 Hz for outstanding low-frequency vibration isolation.

The AMC-MECANOCAUCHO® VT Spring Hanger range is designed for the suspension of acoustic ceilings and machinery requiring exceptional low-frequency vibration isolation.

Each hanger incorporates a high-performance steel spring and an elastomer bushing that prevents acoustic bridging while accommodating minor screw misalignment during installation. This combination ensures optimum vibration isolation, reliable long-term performance, and easy installation.

The robust steel housing is protected with a corrosion-resistant zinc-plated finish for long service life in demanding environments.

Technical characteristics

NEVER METAL TO METAL CONTACT

The hanger has a clearance that allows the threaded rod to swing within a 35° angle envelope to absorb irregularities in the ceiling.

Advantages

Improved isolation

It offers improved isolation compared with conventional anti-vibration mounts of similar geometry.

Easy Installation

This mount requires minimal structural modifications, making installation quick and straightforward.
