Expansion Joints for Marine Exhaust Systems

Flexible joints designed to accommodate thermal expansion, movement and vibration in marine exhaust systems.

Expansion joints for marine exhaust systems are designed to accommodate movement caused by thermal expansion and contraction, as well as vibration and relative displacement within the exhaust system.

Their flexibility helps reduce the mechanical loads transmitted to the engine, manifolds, silencers, supports and other exhaust system components.

When correctly sized and positioned, expansion joints help reduce mechanical stress and component fatigue, improving the reliability and service life of the exhaust system under marine operating conditions.

AMC MECANOCAUCHO
Industrialdea Zona A - Pab. 35.
Asteasu E-20159, Gipuzkoa
Spain
