AKUSTIK HVAC Kit

Kit of 16 anti-vibration hangers for ventilation ducts and HVAC systems, up to 20 kg per point, providing a low natural frequency and effective vibration isolation.

The **AMC-MECANOCAUCHO® AKUSTIK HVAC Kit** includes **16 elastic elements** specifically designed for the **anti-vibration suspension of ventilation ducts and HVAC systems**.

The elastomer geometry, **optimised using FEM analysis**, provides **low dynamic stiffness and a low natural frequency**, promoting effective vibration isolation and reducing the transmission of **structure-borne noise** from the ductwork to the building structure.

Each element can support a **load of up to 20 kg per point**. Its design provides effective **elastic decoupling** between the ventilation system and the structure, while offering a compact, easy-to-install and cost-effective solution.

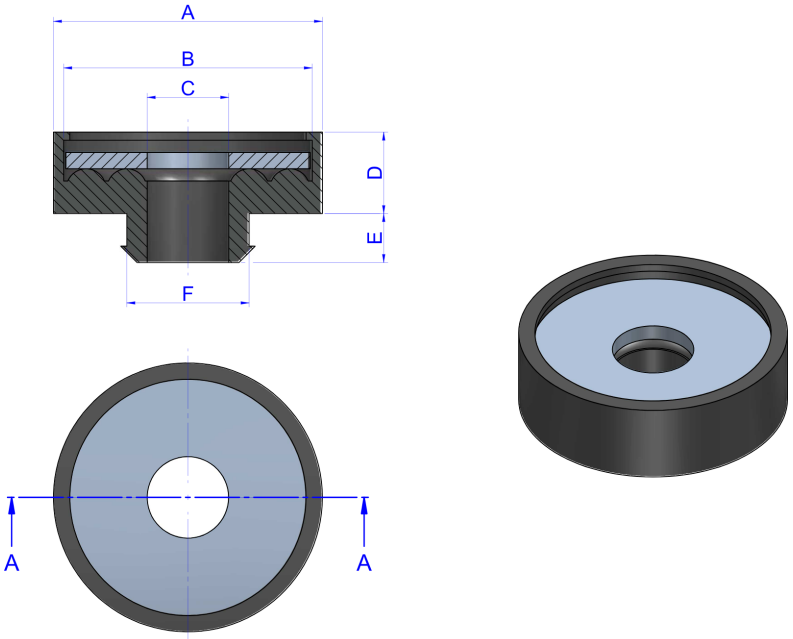

The kit includes **16 rubber elements with galvanised washers, supplied without screws**, and is particularly suitable for **ventilation and HVAC installations** requiring effective vibration isolation.

Advantages

Easy Installation

This mount requires minimal structural modifications, making installation quick and straightforward.
