Vibrabsorber Medium Spring Mounts

Compact spring mounts for low loads and the isolation of low-frequency vibrations, optionally available with a Sylomer® base for additional isolation of higher-frequency vibrations.

The **AMC-MECANOCAUCHO® Vibrabsorber Medium spring mounts** have been designed for the **isolation of low-frequency vibrations** generated by machinery and equipment with rotating or oscillating components.

Thanks to their **compact design and low installation height**, they are particularly suitable for machines with **low loads** and for applications where installation space is limited, such as **fans, air-conditioning units and other HVAC equipment**.

The spring mounts are available with **different mounting options**, allowing them to be adapted to the specific requirements of each installation.

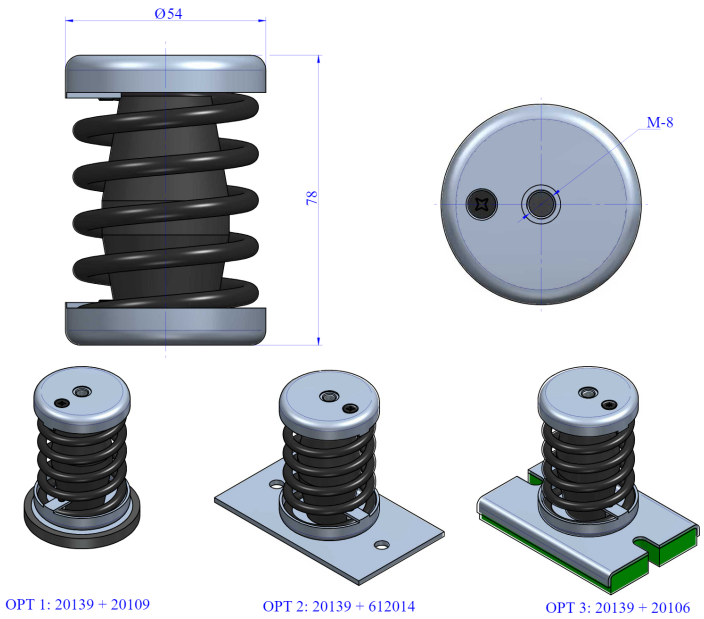

Optionally, the spring mounts can be fitted with a **Sylomer® base**. This complements the performance of the steel spring by reducing the transmission of **higher-frequency vibrations**. The combination of a **steel spring and Sylomer®** therefore provides effective vibration isolation over a broader frequency range.

Advantages

Easy Installation

This mount requires minimal structural modifications, making installation quick and straightforward.

Improved isolation

It offers improved isolation compared with conventional anti-vibration mounts of similar geometry.
