Type P Anti-Slip Anti-Vibration Mount

Cylindrical Type P anti-vibration mount with an anti-slip base and central through-hole, designed for vibration isolation without mechanical fixing.

The **AMC-MECANOCAUCHO® Type P Anti-Slip Anti-Vibration Mount** combines the characteristics of the conventional Type P with an **anti-slip rubber base**, allowing installation **without anchoring or mechanical fixing** .

Its **central through-hole** also allows the use of a bolt or threaded rod where guidance or fixing is required. The high-grip base helps prevent movement of the machine under normal operating conditions.

The absence of rigid fixing maintains **good vertical flexibility** while simplifying installation, removal and repositioning of the equipment.

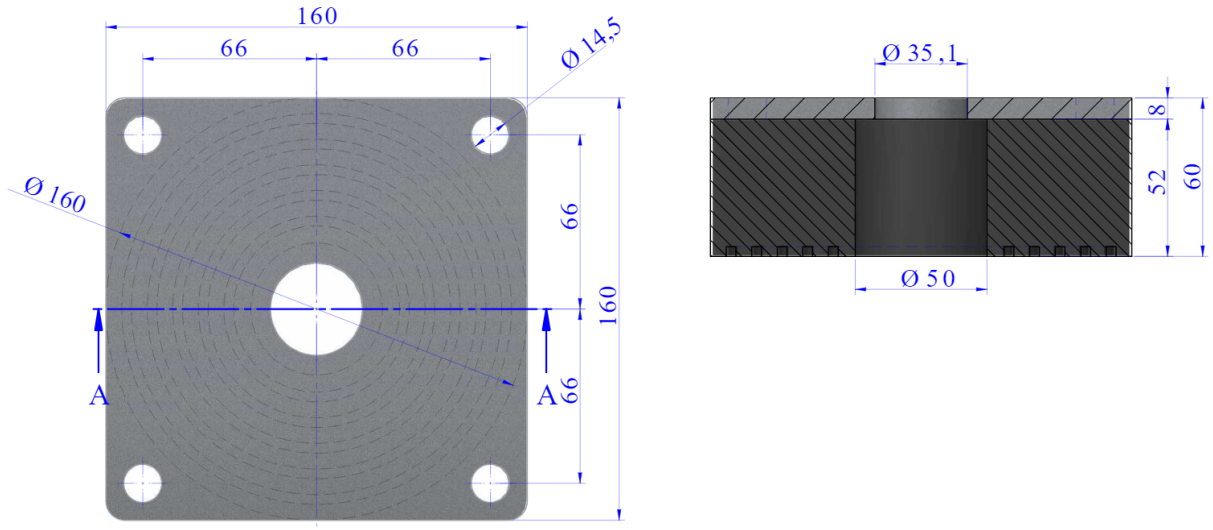

The Type P Anti-Slip mount is particularly suitable for **light machinery and technical equipment** requiring vibration isolation, good stability and simple installation without permanent anchoring.
