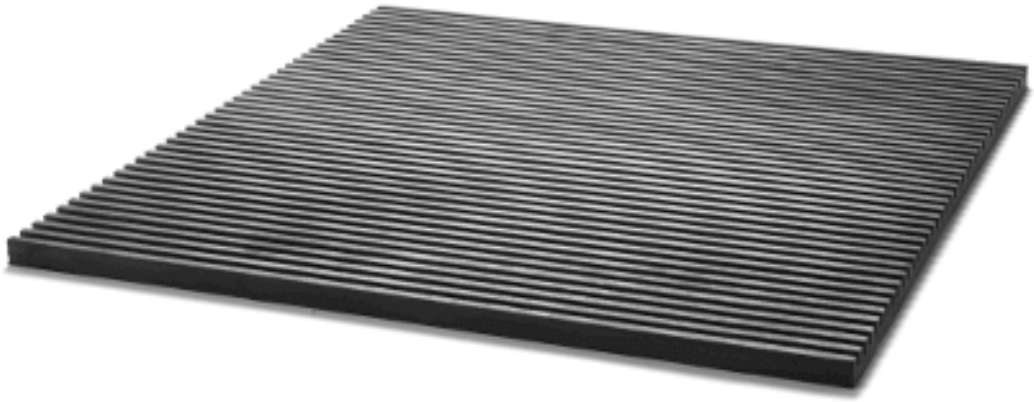
400 × 400 Vibration Isolation Pads

Rubber vibration isolation pads that can be easily cut to size and installed without mechanical fasteners to reduce vibration transmission from machinery and equipment.



AMC-MECANOCAUCHO® 400 × 400 Vibration Isolation Pads are rubber elements designed to **reduce vibration transmission** between machinery and its supporting structure.

Available in different **thicknesses and rubber compounds**, they allow the stiffness and vibration isolation performance to be adapted to the requirements of each application. They are particularly suitable for the **isolation of medium- and high-frequency vibrations**.

Installation is particularly simple: the pads can be **easily cut to the required dimensions** and placed directly beneath the machine without mechanical fasteners. They can also be bonded in place when required by the installation.

Depending on the model, different levels of **flexibility and grip** are available. For applications exposed to **oils or other hydrocarbons**, a suitable rubber compound should be selected.

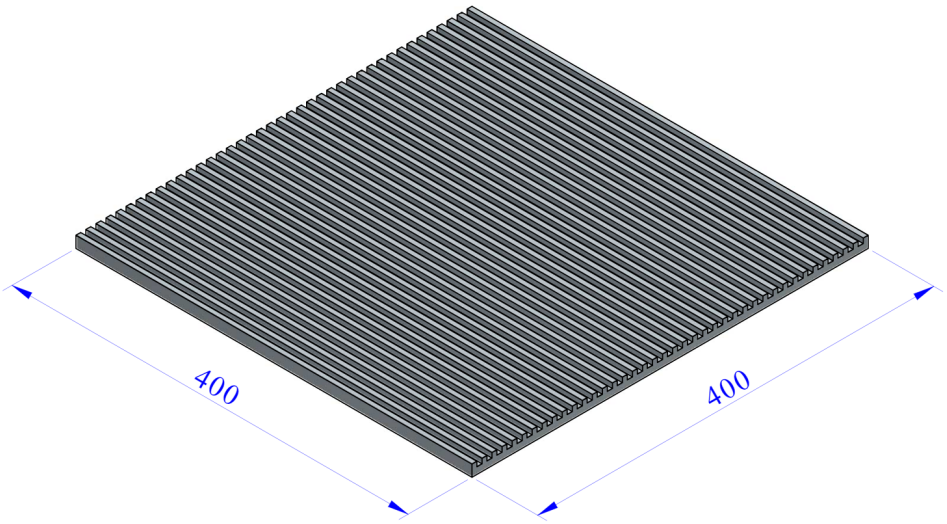
RUBBER BLOCKS AND MATS 400 x 400



Type	Max. Load (kg/cm2)	Code	Weight(lbs)	Thickness(in)
RUBBER BLOCKS AND MATS 400 x 400	6	152003	4	0.47

Advantages

Easy installation

This mount requires no major modifications to the structure for installation.
