Rectangular Rubber Stops

Rectangular rubber stops with a reinforced metal base, designed to absorb high-energy impacts and limit the motion of heavy masses.

The **AMC-MECANOCAUCHO® Rectangular Rubber Stops** are designed to **absorb high-energy impacts and limit the travel of moving parts or equipment**. Their rectangular shape provides a **large contact area**, helping to distribute impact forces and protect structures and mechanical components.

Manufactured from **rubber bonded to a robust metal base**, they provide a strong bond and a **high energy absorption capacity**. The progressive deformation of the rubber helps control deceleration, **reduce the forces transmitted to the structure** and minimize noise during impact.

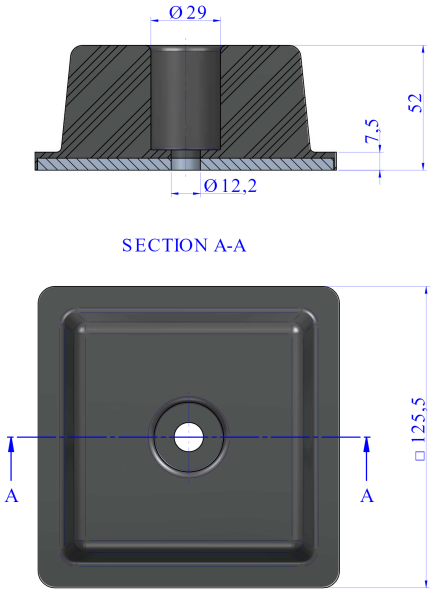

Thanks to their **robust construction, reliability and energy dissipation capacity**, AMC-MECANOCAUCHO® Rectangular Rubber Stops are particularly suitable for **heavy machinery, transportation equipment, loading ramps, lifting systems and industrial applications** requiring controlled stopping of moving masses.

Technical characteristics

The elastic buffers are made with a compound of rubber which permits major deformations with notable absorptions of energy.

They can be made with high-damping rubber to order. The absorption of energy is performed thus, irreversibly and opposes the rebound phenomenon.

Advantages

Easy installation

This mount requires no major modifications to the structure for installation.

Mount offering high stability

Suspensions built with this mount barely move, thanks to a geometry designed to control the movement of the suspended element.
