Anti-slip P-Type

Cylindrical support with non-slip base and central hole. Insulating, elastic, and requiring no fixing, used as a stop or technical support.

The **AMC MECANOCAUCHO® Non-Slip Type P** family combines the advantages of the traditional cylindrical support Type P with a **non-slip rubber base**, thus offering **a vibration-damping solution without the need for mechanical anchoring**.

Its **through central hole** allows for use with screws or rods for **guiding or partial mounting**, but it can also be installed **without fixation**, thanks to its **high-friction surface**, which prevents machinery displacement under normal operating conditions.

The absence of rigid fixings allows for greater vertical elasticity, making this support an ideal solution for **light machinery, panels, auxiliary equipment, and technical furniture** where basic vibration isolation is required, but with ease of assembly, disassembly, or repositioning.

Advantages

Easy installation

This mount requires no major modifications to the structure for installation.
