Anti-Slip Vibration Isolators

Anti-slip rubber vibration isolators for light machinery, requiring no anchoring or mechanical fastening, providing stability and vibration isolation.

The **AMC-MECANOCAUCHO® Anti-Slip range** is designed for applications requiring both **anti-slip performance and vibration isolation**, without permanent mechanical fastening.

These vibration isolators are manufactured from **high-grip rubber**, providing excellent contact with the supporting surface and helping to prevent machinery and equipment from moving due to vibration.

They are particularly suitable for installations where permanent fastening of the machine to the floor is not desirable, providing a **simple, quick, and removable installation**.

The Anti-Slip range is particularly suitable for **light machinery and technical equipment** requiring good stability, protection against slipping, and a **reduction in vibration transmission**.
