B-Type Vibration Isolators

Sandwich vibration isolator without intermediate plates, featuring a simple and robust design for vibration isolation of machinery.

AMC-MECANOCAUCHO® Type B Vibration Isolators feature a **sandwich configuration** in which the rubber is bonded directly between two outer metal plates, **without intermediate plates**.

This simple and robust design combines **good vertical flexibility with high lateral stiffness**, helping to reduce vibration transmission while maintaining good machine stability.

Thanks to their compact design, Type B isolators can be easily integrated into a wide range of industrial applications and are particularly suitable where **installation space is limited** or where high deflection is not required.

The bonded connection between the rubber and metal plates provides a **robust and durable construction**, suitable for the dynamic loads encountered in industrial machinery and equipment.

Advantages

Easy installation

This mount requires no major modifications to the structure for installation.
