Type P Vibration Isolator

Cylindrical vibration isolator with a central through-hole for increased flexibility, designed for vibration isolation, support, and guidance of machinery and equipment.

AMC-MECANOCAUCHO® Type P Vibration Isolators are cylindrical isolators featuring a **central through-hole**, designed to operate primarily in **vertical compression** and reduce vibration transmission from machinery and equipment.

The central hole not only facilitates **installation using a bolt or threaded rod**, but also **increases the flexibility of the isolator**, providing greater and controlled deflection under load.

Thanks to their geometry, Type P isolators can be used both as **vibration isolation supports** and as **buffers or guiding elements** where certain movements need to be accommodated or limited.

They are manufactured from **vulcanized rubber** and are available in different sizes and hardness grades, allowing their elastic characteristics to be matched to the load and requirements of each application.

Advantages

Easy Installation

This mount requires minimal structural modifications, making installation quick and straightforward.
