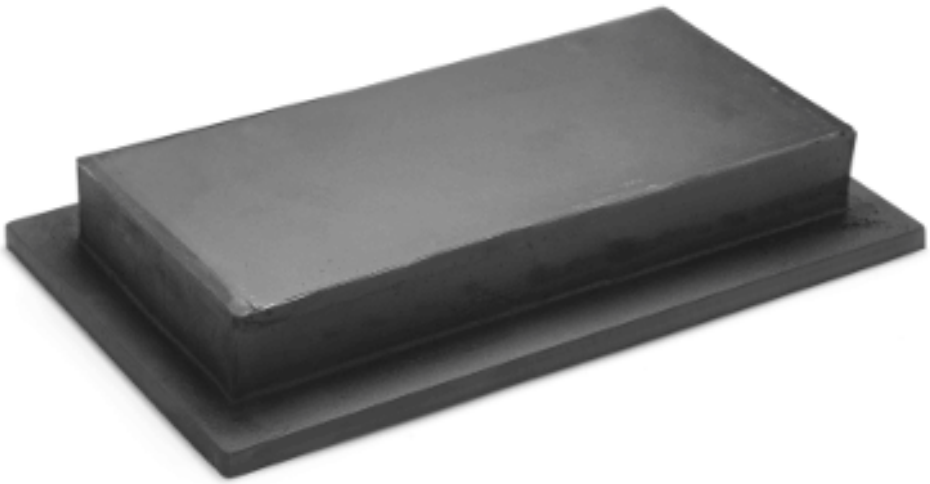
Type S Anti-Vibration Mount

Rectangular anti-vibration mount designed to operate in compression, with 10 mm metal plates and different heights to adjust flexibility and vibration isolation.



The **AMC-MECANOCAUCHO® Type S Anti-Vibration Mounts** are rectangular mounts designed primarily to operate in **vertical compression**. The different available heights allow the flexibility of the mount to be adapted to the requirements of each application.

These mounts consist of a **rubber element vulcanised between two 10 mm thick flat metal plates**. The lower plate has a larger surface area than the upper plate, providing **good stability and improved load distribution**.

The different available heights allow the **vertical flexibility and natural frequency of the system** to be adjusted in order to achieve a level of vibration isolation suited to the characteristics of each application.

Advantages

Easy Installation

This mount requires minimal structural modifications, making installation quick and straightforward.
