Anti-Seismic Elastic Fixing Kit

Elastic fixing kit with anti-vibration washers, designed to prevent vibration bridges through the anchor bolts of seismic restraint systems.

The **AMC-MECANOCAUCHO® Elastic Fixing Kit** is designed to prevent **vibration bridges through the anchor bolts** used to secure seismic restraint systems.

The **elastic washers** decouple the bolt from the supported structure and prevent **rigid contact that could transmit vibrations**. This helps preserve the vibration isolation performance of the system while maintaining a secure mechanical fixing.

This system is particularly recommended where anchor bolts pass through elastically isolated components and could create a **rigid connection between the equipment and its supporting structure**.

The thickness and configuration of the washers depend on the application, type of mount and installation conditions. Please contact our technical department to determine the appropriate configuration.

1 AMC/1V-SR/1V-SH + SYLOMER

Type	Code
1 AMC/1V-SR/1V-SH + SYLOMER	708064

Advantages

Easy Installation

This mount requires minimal structural modifications, making installation quick and straightforward.

Improved isolation

It offers improved isolation compared with conventional anti-vibration mounts of similar geometry.
