SN Anti-Vibration Mounts

High-elasticity, low-natural-frequency anti-vibration mounts for auxiliary machinery and onboard equipment requiring a high level of vibration isolation.

The **AMC-MECANOCAUCHO® SN anti-vibration mounts** are designed for **auxiliary machinery and onboard equipment** requiring a **high level of vibration isolation**.

Their **high elasticity and low natural frequency** effectively reduce the transmission of vibration to the vessel structure. They are particularly suitable for equipment operating at **low excitation frequencies**, where conventional anti-vibration mounts may provide insufficient isolation performance.

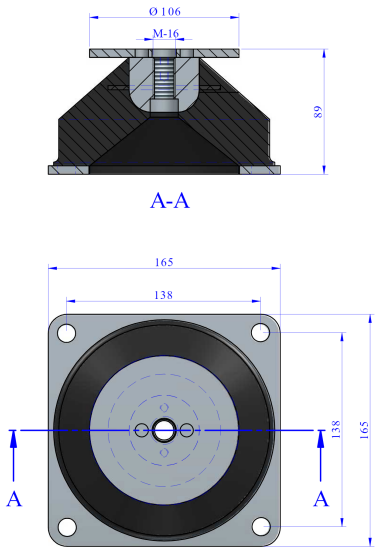

Their design also accommodates **large movements and dynamic loads in different directions**. SN mounts are therefore particularly suitable for **generator sets, pumps, compressors and other onboard auxiliary equipment** where a high level of vibration isolation is required.

Advantages

Easy Installation

This mount requires minimal structural modifications, making installation quick and straightforward.

Improved isolation

It offers improved isolation compared with conventional anti-vibration mounts of similar geometry.
