SX Machine Mounts

Simple and cost-effective machine mount without height adjustment, providing stable, non-slip support for light equipment and simple applications.

The **AMC-MECANOCAUCHO® SX Machine Mounts** are designed to provide **simple and stable support for light machinery and equipment**, without requiring floor anchoring.

Unlike adjustable machine mounts, the SX model has **no height-adjustment system**, resulting in a particularly simple, compact and cost-effective design.

Its base provides **good contact with the floor** and helps limit movement of the machine during operation.

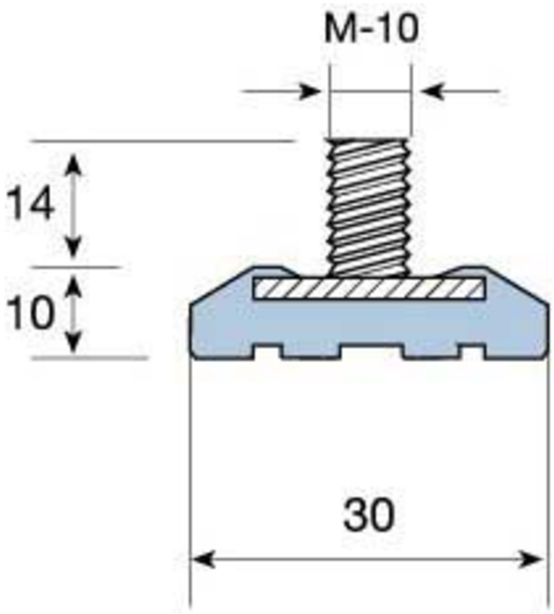

Thanks to their **simplicity, compact dimensions and cost-effective design**, SX mounts are particularly suitable for **small machines, auxiliary equipment and light industrial applications** where levelling is not required.

Technical characteristics

The elastomer used is a mixture of oil-resistant synthetic Nitrile Butadyene Rubber (NBR).

Advantages

Easy Installation

This mount requires minimal structural modifications, making installation quick and straightforward.
