

9V-SR Spring Isolator

High-capacity spring isolator with Sylomer® base, offering up to 1.2 in (30 mm) static deflection and a natural frequency as low as 4 Hz.

The **AMC-MECANOCAUCHO® 9V-SR Spring Isolator** is designed for the **vibration isolation of machinery and equipment with high loads**, requiring a low natural frequency and effective low-frequency vibration isolation.

With a **static deflection of up to 1.2 in (30 mm)**, the springs provide **natural frequencies as low as 4 Hz**, ensuring effective low-frequency vibration isolation.

An **integrated leveling system** facilitates height adjustment and accurate leveling of the equipment during installation.

The 9V-SR Spring Isolator is supplied as standard with a **Sylomer® base**, which complements the action of the springs by reducing the transmission of **mid and high frequencies that may propagate through the steel springs**. The **springs + Sylomer® combination** therefore provides effective vibration isolation over a broader frequency range.

Elastic properties

Technical characteristics

The mounts are able to reach low natural frequencies from 3 to 5 Hz. The spring combined with sylomer® is able to provide high isolation at low and medium frequencies.

The curves are showing the deflection and natural frequencies according to the load of the spring. Temperature working range from -30 to 70°. Short term higher temperatures are possible.
