

Akustik +Sylomer® Sound Clip

Low-profile acoustic sound clip with Sylomer® for wall linings and suspended ceilings. Fast profile fixing and effective acoustic decoupling of the metal frame.

The Akustik + Sylomer® Sound Clip is a compact acoustic clip designed for the acoustic decoupling of metal frames in wall linings and suspended ceilings.

Its Sylomer® resilient element effectively reduces the transmission of vibrations and structure-borne sound between the metal frame and the supporting structure, minimising acoustic bridges at the fixing points.

Thanks to its low-profile design, the Sound Clip makes it possible to build high-performance acoustic wall linings while minimising the loss of installation depth. Its design also allows quick and easy installation of the metal profiles.

Its robust fail-safe metal construction ensures secure fixing and long-term reliability. The Sound Clip is particularly suitable for residential buildings, studios, auditoriums, plant rooms and refurbishment projects requiring high acoustic performance with minimal wall or ceiling thickness.
