Akustik Wall Up +Sylomer®

Resilient support for the acoustic decoupling of the top track of wall linings. Combination of rubber and Sylomer® for effective isolation over a wide frequency range.

The **Akustik Wall Up + Sylomer®** is designed to provide **acoustic decoupling at the top of wall linings**, creating a resilient connection between the metal frame and the ceiling.

The system combines **rubber and Sylomer®** to optimise dynamic behaviour and reduce the transmission of vibrations and **structure-borne sound over a wide frequency range**.

Installed at the **top track of the frame**, it prevents a rigid connection with the supporting structure and helps **minimise acoustic bridges**, while maintaining the support and stability of the wall lining.

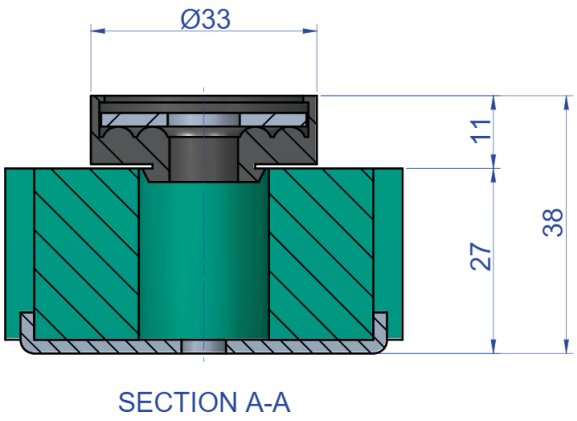

Its robust and compact design facilitates installation and makes it particularly suitable for **high wall linings, studios, auditoriums, residential buildings and soundproofing projects** requiring effective decoupling of the frame.

Advantages

Easy Installation

This mount requires minimal structural modifications, making installation quick and straightforward.

Incorporates Sylomer® elastomer, highly effective for isolating both high and low frequencies

Sylomer® provides high isolation across a wide frequency range and is particularly effective at high frequencies, effectively eliminating the transmission of structure-borne noise.

Secure ceiling anchorage

With more than one fixing point to the overhead slab, it is particularly reliable for anchorages with low load-bearing capacity.
